Expertise in bug reporting and tracking using JIRA, involved in debugging and root cause analysis.
Performed various testing types in Agile environment, including smoke, functional, and regression testing.
Technologies used: HTML5, CSS3, JavaScript, Git, JIRA, Agile.

📂 Projects

**Github Portfolio** ⧉
HTML, CSS and JavaScript.

Grocery App ⧉
A shopping app to revolutionise shopping convenience. Which allows you to shop for groceries online and even make quick offline purchases by scanning items and paying on the go.
Any-List brings a time-saving solution, where the users can effortlessly generate their own bills via scanning. It saves time and energy for both shoppers and bill counter personnel.
Created using Next.js and Implemented NextAuth with MongoDB for secure personalised authentication and user profile management, while enabling efficient grocery data storage, order history, cart management, and flexible payment options like PayPal, Credit-Card and Cash.

Next JS, MongoDB, Next Auth authentication, Git and GitHub

🎓 Education

Bachelor of engineering (E&C), bangalore institute of technology
August 2014 – December 2018 | Bangalore, India
